

SECORP INDUSTRIES

Safety, It's Our Only Business.

About Secorp

History

Secorp Industries, started in 1972, is a Safety Company providing Respiratory Protection, Gas Detection, Rescue Services, Safety Consultants and Training to Oil and Gas and General Industry Companies.

Secorp is the oldest domestic provider of H₂S Safety Services in the Oil and Gas Industry. Secorp provides services for Drilling, Workover, Construction, Production and Plant Operations both on land and offshore throughout the world.

Over the past 35 years Secorp has built many long lasting relationships due to the unmatched high quality service and expertise in our business which we provide for our customers.

Mission

PROVIDE "QUALITY SAFETY SERVICES" TO OUR CUSTOMERS.

What is Secorp's Definition of "Quality Safety Service"?

Secorp defines quality safety service as Compliance to Regulations, Reliability of Equipment, Highest Standard of Equipment Maintenance and Presentation, Professional Representation, Compliance to all Roles and Responsibilities, Standard Operating Procedures, Policies and Safety and Training Programs to exceed our Customers Expectations

Respiratory Protection

Secorp Industries has been a leader in Respiratory Protection for more than 35 years. We can develop a comprehensive respiratory protection program designed to satisfy regulatory guidelines and provide the highest level of personal protection available. Secorp specializes in a variety of self-contained breathing apparatus and represents all of the major manufacturers. Factory trained personnel will inspect equipment at our facility or yours to ensure that it is properly maintained. Secorp also designs breathing air systems for all applications and was instrumental in the design of the industry's first hose line unit. We offer stationary air storage systems for problem areas and mobile systems for unexpected situations. Our systems satisfy OSHA, NIOSH, ANSI and MMS guidelines, enhancing the safety of your most valuable asset, your employees.

Secorp carries several lines of quality breathing air compressors for situations requiring a continuous air supply. The latest technology in air purification and air quality testing ensures that the breathing air we provide is of the highest standard.

- Self Contained Breathing Apparatus (30-Minute and 15-Minute Units)
- Supplied Air/Escapes Respirators (5-Minute Units)
- High Pressure Cascade Systems – 2-Bottle Carts to 40-Bottle Trailers
- High Pressure Diesel and Electric Breathing Air Compressors
- Low Pressure Manifolds

Gas Detection

Gas detection and monitoring systems are essential to determine changes in working conditions in various environments. Prompt and precise detection of the presence and concentrations of certain gases allows for timely action to be taken, whether precautionary or life saving. Secorp has extensive experience in designing, fabricating and implementing state-of-the-art gas detection and monitoring systems that are practical and innovative, as well as easy and cost effective to operate and maintain.

Today's industrial applications often require a sophisticated approach. Secorp can design and install fully integrated turnkey systems for new projects and for existing compatible equipment, either for rent or purchase.

Our experienced staff will assemble the system and provide ongoing maintenance.

- Installation of Fixed Gas Detection Systems (Multiple Gas Systems Available)
- Repair and Maintenance of Portable and Fixed Gas Detection Systems
- Integration of Gas Detection System into current Safety Controls
- System Consultation from conception to implementation
- Multiple Warranty Repair Centers for Major Gas Detection Manufacturers Products

Rescue Services

Secorp Industries rescue services mission is to assist our customers in the compliance with regulations and ensure the safety of our customers' personnel while performing confined space or high angle work. Secorp accomplishes this by having highly trained rescue professionals coupled with the proper rescue equipment which is customized to the job. The personnel and equipment are kept onsite and ready to go at all times.

- Training levels from Confined Space Entry and Rescue up to Level III Rope Rescue Technicians
